

Bittersweet Nightshade

Integrated Pest Management Control Measures

Mechanical

This plant has a shallow root system and can be hand-pulled when growing in moist, loose soils. However, if root fragments remain in the soil, re-growth is likely. Follow up with additional hand-pulling.

Cultural

Dense groundcover may provide some competition to germinating nightshade seeds, but shading has little effect on mature infestations.

Biological

No biological controls are currently available in the United States.

Chemical

Always read herbicide label before applying

Solanum dulcamara

FOLIAR SPRAY			
Chemical	Brand Names	Label Use	Calendar/Plant Stage
aminopyralid + triclopyr amine	Milestone VM	Non-cropland, pasture	Mid-summer, before berries form
triclopyr	Garlon 3A	Non-cropland	Summer, when plants are flowering
glyphosate Non Selective Herbicide	RoundUp	Non-cropland	At flower stage and in the fall
