

Clark County Influenza Surveillance Update

CDC Week 1: December 30, 2018 – January 5, 2019

NOTE: All data are preliminary and may change as more reports are received. As influenza season begins and ends, the number of tests conducted will be smaller than at times of peak activity; therefore, the reliability of positivity figures may decrease as a result.

Summary

- In Week 1, Clark County positivity rose to 11.4%, above the 10% threshold for the first time this season.
- Cowlitz County influenza positivity also surpassed the 10% threshold at 10.3%
- The CDC reported national influenza positivity decreased slightly during Week 52 to 13.7%.
- Statewide influenza positivity, reported by the WA State Dept. of Health, remained low during Week 52, at 7.1%

Data from Reporting Laboratories Clark County

The **influenza positivity rate** is the percent of influenza tests conducted by reporting laboratories that result positive. Traditionally, agencies including the CDC and WA State DOH use positivity $\geq 10\%$ to define active influenza season.

CDC Week	Date Range	A (H1)	A (H1N1)	A (H3)	A (not subtyped)	Type B	Total influenza	No. Tested	Positivity
51	12/16—12/22	0	1	0	15	0	16	211	7.6%
52	12/23—12/29	0	0	0	20	0	20	236	8.5%
1	12/30—1/5	0	0	0	33	1	34	298	11.4%

Circulating Strains from Reporting Laboratories

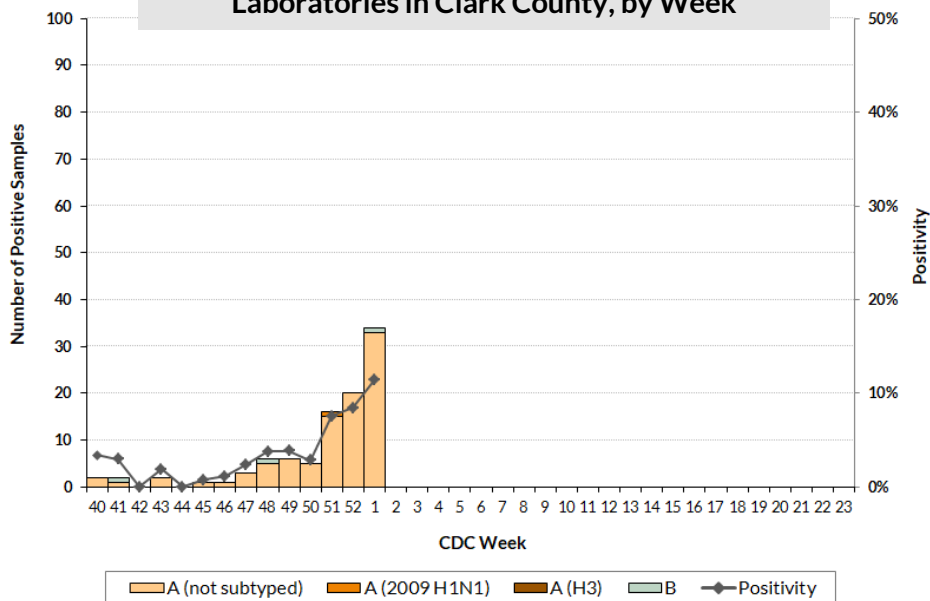

Clark County

Reporting laboratories also may provide details on what **strains of influenza** are reported positive. The colored bars represent how much of each strain of influenza is being reported, while the black line is the corresponding influenza positivity. The below summaries display the breakdown of influenza strains identified in positive results at the local level, by CDC week.

Clark County Total Season Strain Distribution, 2018-2019

Number of Positive Influenza Tests from Reporting Laboratories in Clark County, by Week

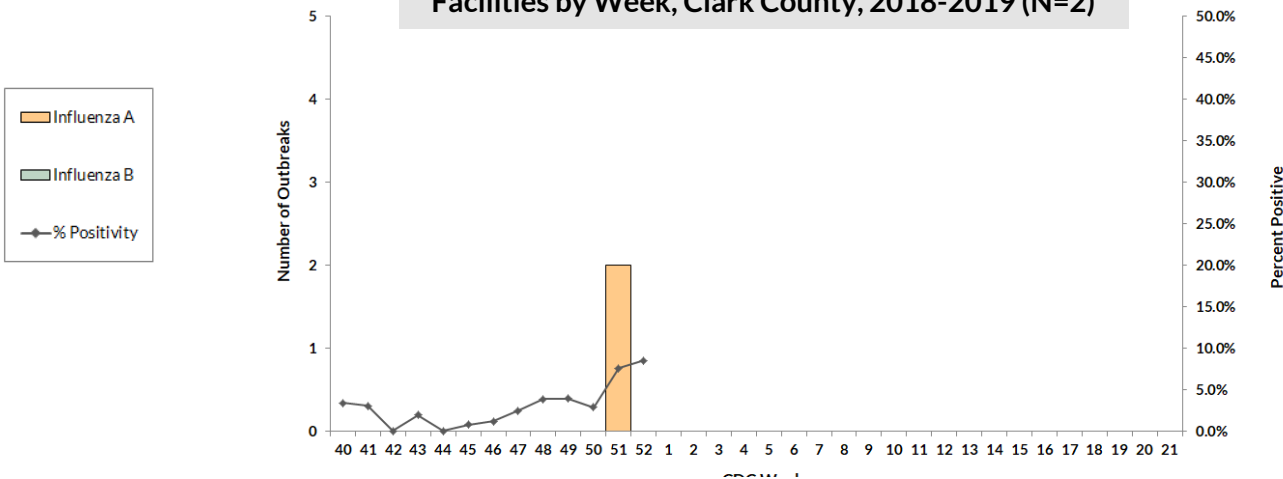

Influenza Outbreaks in Long Term Care Facilities

Clark County

Clark County Public Health identifies and responds to influenza outbreaks in long term care facilities around Clark County, in order to provide recommendations and guide further community action. So far this influenza season, **two influenza outbreaks have been reported**, both of which were caused by influenza A viruses.

Influenza Outbreaks Reported by Long-Term Care Facilities by Week, Clark County, 2018-2019 (N=2)

Cowlitz County Influenza Surveillance Update

NOTE: All data are preliminary and may change as more reports are received. As influenza season begins and ends, the number of tests conducted will be smaller than at times of peak activity; therefore, the reliability of positivity figures may decrease as a result.

Cowlitz and Clark Counties are neighboring local health jurisdictions in Washington State. Although separate entities, both share a common goal of preventing disease and promoting public health. To that end, Cowlitz and Clark County often partner in disease response efforts. This year, Cowlitz and Clark counties will continue working together to provide reliable influenza surveillance data to our communities.

Data from Reporting Laboratories

Cowlitz County

The **influenza positivity rate** is the percent of influenza tests conducted by reporting laboratories that result positive. Traditionally, agencies including the CDC and WA State DOH use positivity $\geq 10\%$ to define active influenza season.

CDC Week	Date Range	A (H1)	A (H1N1)	A (H3)	A (not subtyped)	Type B	Total influenza	No. Tested	Positivity
51	12/16—12/22	0	0	0	2	0	2	33	6.1%
52	12/23—12-29	0	0	0	5	0	5	58	8.6%
1	12/30—1/5	0	0	0	8	0	8	78	10.3%
